Your investment thesis can fall out of date after you invest

Diligence captures the risks and assumptions behind an investment at one point in time. After the check is written, new evidence arrives, but the original thesis is rarely updated in one place.

DILIGENCE IS A SNAPSHOT

Before you invest, you develop a view of the company, its risks, and what must be true for the investment to work. That view reflects the information available at the time and is recorded in a diligence memo that is rarely reopened.

Your view of an investment updates at board reviews

NEW ISSUES REACH THE BOARD, BUT THE INVESTMENT THESIS IS NOT REVISITED

Board decks are rebuilt each quarter around current results and the issues demanding attention. They rarely carry forward what the investment depended on, what management intended to prove, or whether those questions were resolved. New issues enter the agenda while earlier assumptions disappear from view.

THE LONGER A RISK REMAINS OPEN, THE MORE CAPITAL DEPENDS ON IT

Some investments turn on a small number of prominent, potentially binary risks: a permit is issued, an anchor customer commits, a technical milestone is reached, or a tax credit survives. If those risks are not resolved early, more time and capital are committed while the outcome remains uncertain.

PORTFOLIO REPORTING TRACKS PERFORMANCE, NOT THE ASSUMPTIONS BEHIND IT

Portfolio systems collect company updates and reported metrics. They do not maintain a standing record of what the investment depended on, how the evidence has changed, or which unresolved risk deserves attention next.

> *"The board's job is to actively govern those assumptions: tracking whether they still hold as execution unfolds."*

Phrona keeps each investment connected to the assumptions behind it

Phrona connects new information to the assumptions behind each investment, shows what it changes, and helps investors decide where to look next.

MAKE INVESTMENT ASSUMPTIONS EXPLICIT

Phrona records what must be true, grades the evidence behind each assumption, and distinguishes what is known from what remains unresolved.

YOUR PORTFOLIO

Shared assumptions across the portfolio

EVALUATE NEW EVIDENCE AGAINST THEM

As new information arrives, Phrona shows which assumptions it strengthens or weakens and which decisions and commitments may need another look.

RESOLVE PROMINENT RISKS FIRST

Phrona shows which open risks matter most, which future commitments depend on them, and what evidence could resolve the uncertainty.

FOLLOW SHARED EXPOSURE ACROSS THE PORTFOLIO

Phrona shows when several companies depend on the same policy, customer, supplier, input, or price, so one development can be considered everywhere it matters.

Phrona can be used by the investor, the company, or both. Every claim keeps its source, and each party controls what it shares.

See how the same $44 million decision looks from the board seat

Resolve critical risks before committing more capital

THE SAME $44 MILLION DECISION, FROM THE BOARD SEAT

A portfolio company approves a $44 million second production line. The investment rests on three assumptions: an anchor customer ramps by Q3, market pricing holds, and production yield reaches target.

Before the remaining capital is committed, the board needs to understand whether those risks have been resolved or whether the original decision needs another look.

WITH PHRONA

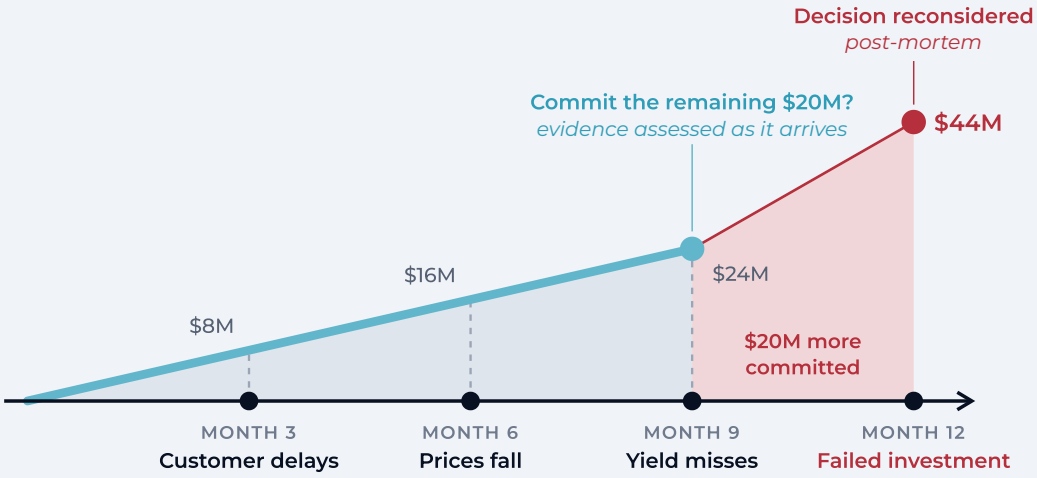

$20M redirected

Phrona shows how new evidence affects the three assumptions together. At month nine, the board can ask management whether the remaining $20 million should still be committed.

WITHOUT PHRONA

$20M lost

Each issue appears separately in quarterly updates, without bringing the original investment decision back into view. The remaining capital is committed before the decision is reconsidered.

Three ways investors can use Phrona

Diligence

DEALS HEADING TO AN INVESTMENT COMMITTEE

Tests the investment case using company materials, distinguishes established facts from unresolved risks, and identifies what should be resolved before investment.

Company Brief

BEFORE A FIRST MEETING OR EARLY REVIEW

Shows what the company's plan depends on, how well the key claims are supported, and which questions are worth putting to management.

Portfolio Oversight

BOARD MEMBERS AND PORTFOLIO MANAGERS

Keeps the assumptions behind each investment connected to new evidence, prepares investors for board discussions, and shows where exposure and unresolved risks are shared across the portfolio.

Start with one company

Phrona shows what the company's plan depends on and where to look first.
