Strong returns start with knowing where your investments stand

Due diligence identifies key risks at a point in time. After you invest, new evidence can undermine your thesis as follow-ons put more capital at risk.

DILIGENCE IS A SNAPSHOT

Before you invest, you develop a view of the company, its risks, and what must be true for the investment to perform as expected. That view reflects the information available at the time and is recorded in a diligence memo. That memo is rarely revisited.

Your view of an investment updates at board reviews

NEW ISSUES REACH THE BOARD, BUT THE INVESTMENT THESIS IS NOT REVISITED

New board decks are drafted each quarter, focused on recent results and the pressing issues that demand attention. They rarely carry forward what the investment depended on, what management intended to prove, or whether those questions were resolved. New issues enter the agenda while earlier assumptions disappear from view.

THE LONGER A RISK GOES UNRESOLVED, THE MORE YOUR CAPITAL IS EXPOSED

Some investments turn on a small number of prominent risks: a permit is issued, an anchor customer commits, a technical milestone is reached, or a tax credit survives. If those risks are not resolved early, more time and capital are committed while the outcome remains uncertain.

REPORTING TRACKS PERFORMANCE, NOT WHETHER KEY RISKS ARE RESOLVED

Quarterly reports and board materials capture company updates and performance metrics, but often don't maintain a clear record of whether key investment risks have been resolved. Investors are left to determine how new evidence affects unresolved risks and what requires their attention.

> *"Effective board oversight of strategy execution starts with owning the strategic center—ensuring real choices rest on explicit assumptions, not inherited inertia. From there, the board's job is to actively govern those assumptions: tracking whether they still hold as execution unfolds and distinguishing meaningful signals from noise."*

Phrona keeps your investments connected to their key assumptions

Phrona connects new information to your investment theses and evaluates whether the underlying assumptions still hold, so you can see which risks need attention.

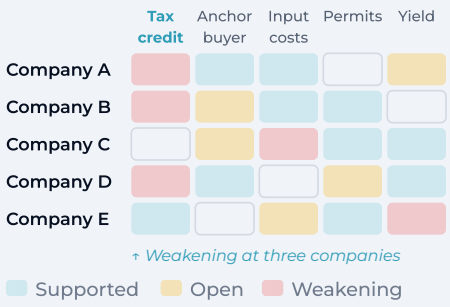

MAKE INVESTMENT ASSUMPTIONS EXPLICIT

Phrona records what must be true, grades the evidence behind each assumption, and distinguishes the known from the unknown.

EVALUATE NEW EVIDENCE AGAINST THEM

As new information arrives, Phrona shows which assumptions the evidence supports and which it calls into question, and which decisions and commitments may need another look.

YOUR PORTFOLIO

Shared assumptions across the portfolio

RESOLVE PROMINENT RISKS FIRST

Phrona shows which open risks matter most, which future commitments depend on them, and what evidence could resolve the uncertainty. When an assumption no longer holds, it also shows which investments, decisions, and commitments are affected.

FOLLOW SHARED EXPOSURE ACROSS THE PORTFOLIO

Phrona shows when several companies depend on the same policy, customer, supplier, input, or price, so one development can be considered everywhere it matters.

Phrona can be managed by the investor, the company, or both.

INVESTOR-LED — SHARED VIEW — COMPANY-LED

Resolve key risks before committing more capital

A $44 MILLION DECISION FROM THE BOARD SEAT

A portfolio company approves a $44 million second production line. The investment rests on three assumptions: an anchor customer ramps by Q3, market pricing holds, and production yield reaches target.

Before the remaining capital is committed, the board needs to understand whether those risks have been resolved or whether the original decision should be reviewed.

WITH PHRONA

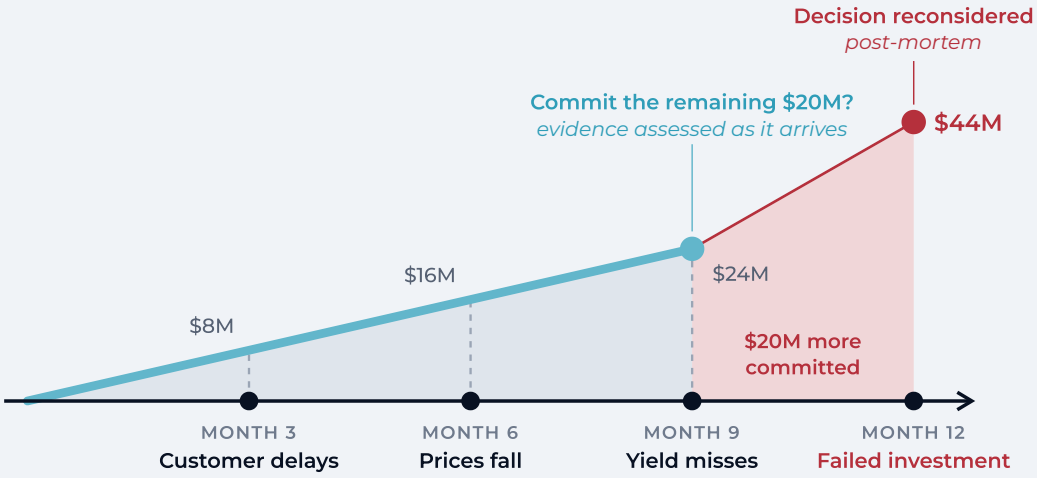

$20M redirected

Phrona shows how new evidence affects the assumptions. In Q3, the board can challenge management on whether the remaining $20 million should still be committed.

WITHOUT PHRONA

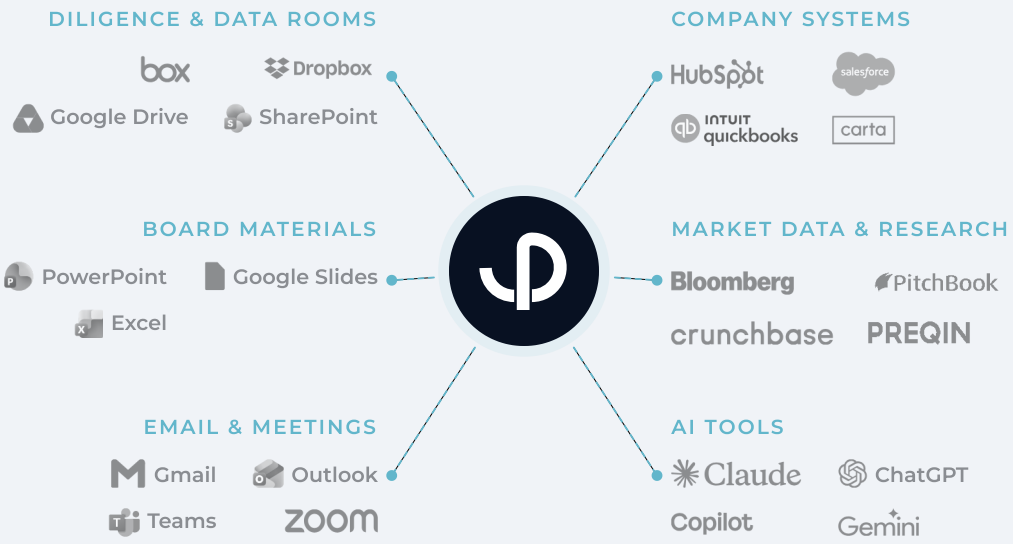

$20M lost

Each issue appears separately in quarterly updates, without bringing the original investment decision back into view. The remaining capital is committed without reconsidering the decision.

Your investment thesis lives in many systems — Phrona holds it together

Diligence, board materials, and reporting each hold part of your investment record. Phrona brings those pieces together so you can see when new evidence impacts your thesis and respond before more capital is committed.

PUTTING YOUR INVESTMENT RECORD TO WORK

Phrona turns scattered evidence into a coherent record of your investments, highlighting unresolved risks and delivering the updates and grounded answers your team needs.

EVIDENCE CONNECTED
New information is tested against each thesis.

CURRENT RECORD
Diligence, board materials, and reporting stay together.

QUESTIONS PREPARED
Know what to ask before each board meeting.

UPDATES DELIVERED
Briefs reach teams where they already work.

GROUNDED ANSWERS
AI tools answer from the same investment record.

Three ways investors can use Phrona

Diligence

DURING DILIGENCE AND BEFORE INVESTMENT COMMITTEE

Test the investment case using company materials, distinguish established facts from unresolved risks, and identify what should be resolved before investing.

Company Brief

BEFORE A BOARD MEETING OR OPERATING REVIEW

See what the company's plan depends on, how well key claims are supported, and which questions to ask management.

Portfolio Oversight

ACROSS THE PORTFOLIO, BETWEEN REVIEWS

Keep investment assumptions connected to new evidence and see which companies share the same exposures and unresolved risks.

Start with one company

Phrona shows what the company's plan depends on and where to look first.
